

# BELISHA BEACONS

*Safety. Confidence. Assurance.*

## Solar Power

As the sole UK distributors and installers of our wireless solar powered systems, we are at the forefront of environmentally friendly lighting solutions.

Our solar panels work by processing the sun's energy and converting it into usable electricity. Automatically generating electricity from sunshine helps to lower monthly power bills and reduce overall dependency on the national grid.

Our solar power technology optimises the battery charge levels over the course of each day utilising the available solar energy.

**By adjusting to the changing weather conditions our solar lighting systems ensure continuous illumination regardless of cloud cover.**
